Kek Tokenomics: Built for Sustainability and Community Growth

Kek operates on a transparent and community-driven tokenomics model designed to ensure fairness, sustainability, and long-term rewards for holders. Here's everything you need to know:

1. Total Supply

- Maximum Token Supply: 1,000,000,000 (1 Billion KEK)
- No additional tokens will ever be minted, ensuring scarcity and a deflationary model.

2. Fair Launch

- No Pre-Sale: KEK was launched with no pre-sale or insider allocations, providing equal and fair access to all participants.
- Moonshot Bonding Curve: KEK was launched on Dex Screener's Moonshot platform, where tokens were sold progressively at increasing prices based on demand.

3. Locked Liquidity

- Permanent Liquidity Lock: Upon migration to Meteora, all liquidity is locked forever, creating a secure and trustless trading environment.

Migration Milestone:

- Occurs when 80% of the token supply is sold on the bonding curve.
- Requires a market cap of 432 SOL to trigger migration.

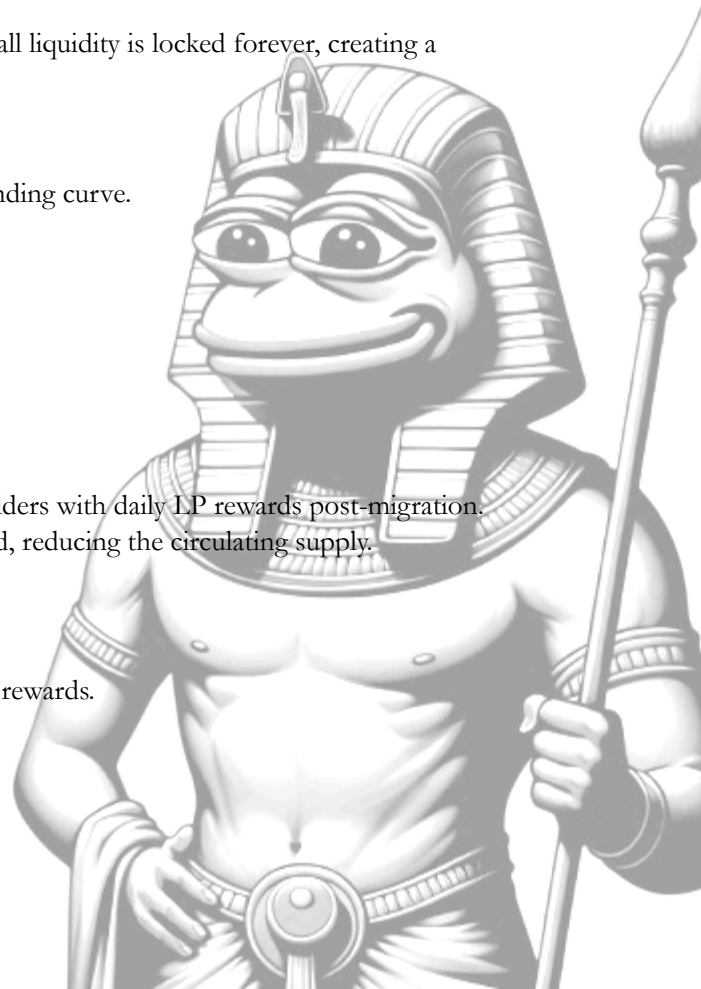

4. AirLock Rewards

What is AirLock?

- -An innovative feature that rewards the Top 50 KEK holders with daily LP rewards post-migration.
- -Rewards are distributed in SOL, while tokens are burned, reducing the circulating supply.

How it Works:

- -Rewards are automatically airdropped every 24 hours.
- -Holders must remain in the Top 50 to continue earning rewards.

Key Benefits:

- -Encourages long-term holding and participation.
- -Locks liquidity permanently, ensuring a stable ecosystem.
- -Deflationary effect through token burns.

5. Community-Centric Design

- Ownership Renounced: KEK's contracts are fully audited, immutable, and ownership has been renounced to ensure decentralization and trust.
- Deflationary Mechanism: Tokens are burned during AirLock rewards, reducing supply and increasing value over time.
- Transparency: All tokenomics and mechanics are publicly accessible, ensuring trust and community confidence.

6. What's Next?

KEK's tokenomics are designed to scale with its growing community. Future plans include enhancing staking and rewards, governance features, and ecosystem integrations to further incentivize participation and long-term growth.

BASED Tokenomics: The Full Ecosystem Overview

BASED is the heart of the KEK ecosystem, offering a multi-faceted utility token with deflationary mechanisms, staking rewards, VIP tiers, bonding, and marketplace features. Combined with the BASED Points System, we ensure early adopters, stakers, and long-term supporters are rewarded at every stage.

Key Facts

- Token Name: BASED
- Ticker: \$BASED
- Total Supply: 100,000,000 BASED (Fixed)
- Initial Market Cap: \$0 (Distributed via BASED Points rewards pre-launch)
- BASED Points Supply: 10,000,000 Points (for early staking rewards)

BASED Points System: Rewarding Early Adopters

BASED Points allow users to start earning rewards before the BASED token is live.

- Non-Transferable Points: Redeemable 1:1 for BASED tokens post-launch.
- Earn by Staking KEK: Stake in the early staking pool to start earning Points now.
- Enhanced APY: Early stakers enjoy higher rewards than post-launch pools.

Early Staking Pool

- Duration: Limited to 30 days pre-launch.
- Rewards: Up to 10,000,000 BASED Points distributed.
- APY: Enhanced rates to reward early supporters.
- Flexibility: No lockup required; early withdrawal penalties apply.

Example:

Stake 10,000 KEK for 30 days with a 100% APY during the early phase:

$$1000 \times \left(\frac{30}{365}\right) \times 1.0 = 822 \text{ BASED Points}$$

These Points convert to 822 BASED tokens post-launch.

BASED Token Utility

1. Staking

- Stake KEK or BASED to earn rewards.
- Stake BASED to boost KEK staking APYs by +10% to +25%.

2. VIP Tiers

Burn BASED tokens to unlock VIP status, offering higher rewards and exclusive perks.

VIP Access:

- Burn 1,000 BASED for VIP (10% APY boost).
- Burn 5,000 BASED for VIP+ (25% APY boost).

3. Bonding Mechanisms

- Lock BASED and KEK liquidity to stabilize the ecosystem.
- Bonding rewards include enhanced staking APYs and special governance privileges.

4. Governance

- Stake BASED to vote on proposals, including reward allocations, partnerships, and ecosystem expansions.

5. Marketplace

Spend BASED tokens in the marketplace on:

- Exclusive NFTs.
- Event access.
- Ecosystem perks.

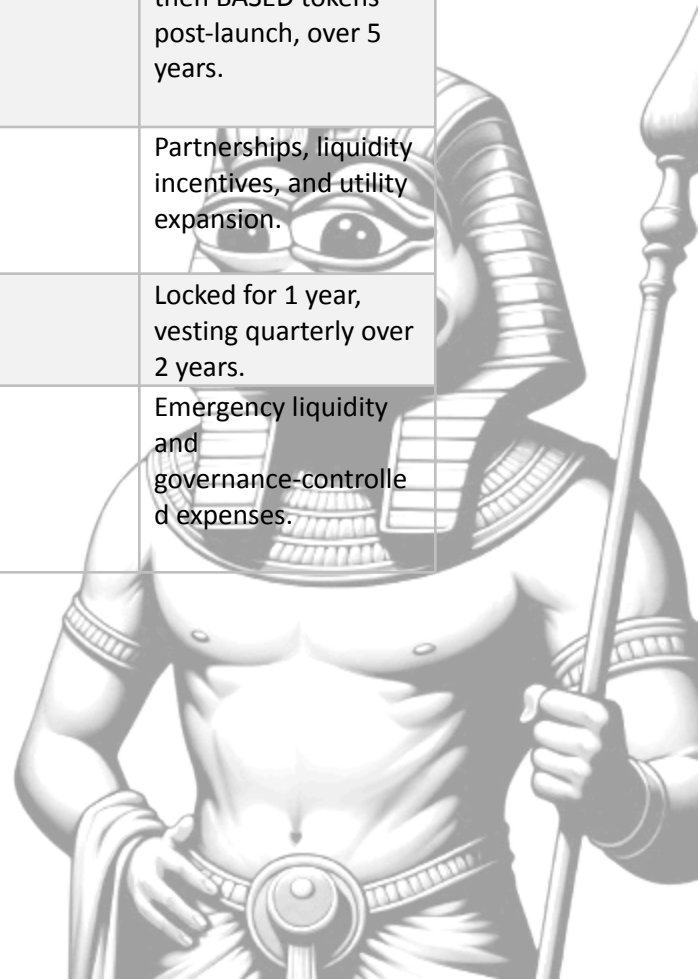

Dynamic VIP Tiers: Earning More by Burning

Tier	Burn Requirement	Perks
VIP	1,000 BASED	+10% APY boost, priority marketplace access, NFT perks.
VIP+	5,000 BASED	+25% APY boost, exclusive staking pools, access to premium NFTs.
Future Tiers	TBD	Dynamic tiers introduced with higher burns for even greater rewards and ecosystem influence.

Tokenomics Overview

Category	Percentage	Supply	Details
Details	50%	50,000,000	Distributed as BASED Points pre-launch, then BASED tokens post-launch, over 5 years.
Ecosystem Growth	25%	50,000,000	Partnerships, liquidity incentives, and utility expansion.
Team & Development	15%	15,000,000	Locked for 1 year, vesting quarterly over 2 years.
Reserve Fund	10%	10,000,000	Emergency liquidity and governance-controlled expenses.

Emission Schedule

Time period	Amount	Percentage
Year 1	25,000,000 BASED	50% of rewards pool
Year 2	15,000,000 BASED	30%
Year 3	7,500,000 BASED	15%
Year 4	2,500,000 BASED	5%

Deflationary Mechanisms

1. Burning for VIP Access:

- VIP and VIP+ tiers require burning BASED tokens, permanently reducing the supply.
- Example: 10,000 participants in VIP tiers burn 30,000,000 BASED, reducing supply by 30%.

2. Marketplace Burns:

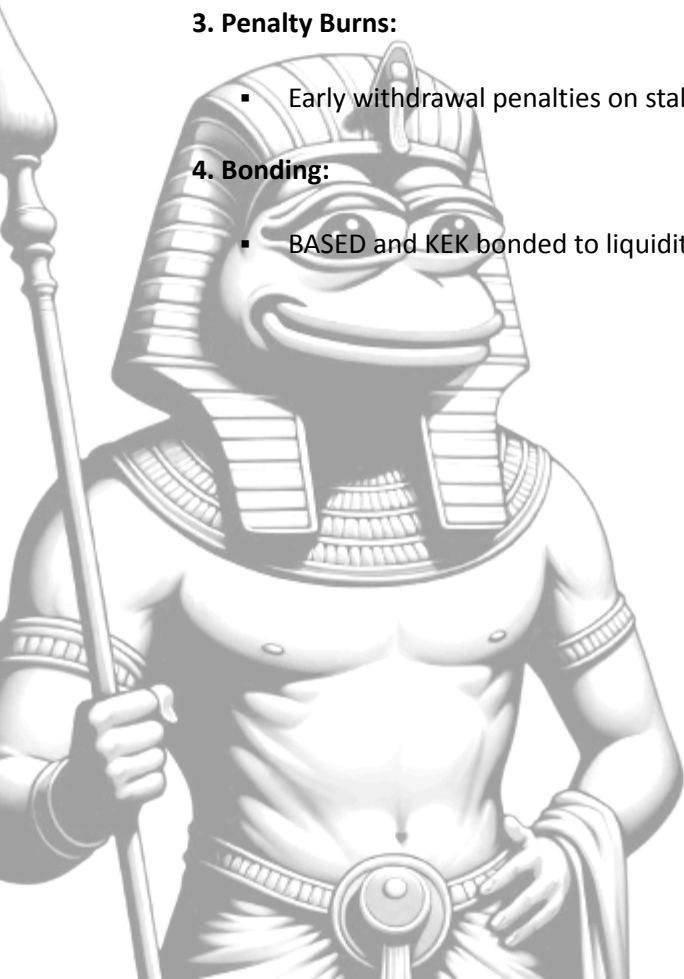

- 1%-5% of BASED spent in the marketplace is burned.

3. Penalty Burns:

- Early withdrawal penalties on staking rewards are burned or redistributed.

4. Bonding:

- BASED and KEK bonded to liquidity are locked, further reducing circulating supply.

Token Flow

1. Pre-Launch:

- Stake KEK to earn BASED Points.
- Points distributed to early stakers with enhanced APYs.

2. Token Launch:

- BASED Points convert 1:1 to BASED tokens.
- Staking pools transition from Points to BASED rewards.

3. Post-Launch Utility:

- Burn BASED for VIP tiers, spend in the marketplace, or bond for liquidity rewards.

\$Based Roadmap

Phase	Focus	Deliverables
Phase 1 (Q1 2025)	Early Staking Pool	BASED Points, KEK staking, enhanced APYs.
Phase 2 (Q2 2025)	BASED Token Launch	BASED redemption, governance staking, DEX listing.
Phase 3 (Q3 2025)	Bonding Mechanisms & VIP Pools	Liquidity bonding, dynamic VIP tiers, enhanced staking.
Phase 4 (Q4 2025)	Marketplace Launch	NFTs, perks, real-world integrations, deflationary burns.
Phase 5 (2026)	DAO & Expansion	Weighted governance, cross-chain utility, global reach.

Why Get BASED Now?

- Early Rewards: Stake KEK now to earn BASED Points and get ahead.
- Enhanced APY: Early adopters benefit from higher rewards.
- Deflationary Supply: Burning mechanisms ensure BASED becomes scarcer over time.
